SUMMARY

AWS Certified cloud professional (SAA-C03, CLF-C02) with a software development background, now focused on hands-on AWS projects across networking, serverless, security, and generative AI. Delivered a live Multi-AZ failover test (RTO under 2 minutes, zero data loss) and a defense-in-depth secure application with WAF and SSM Session Manager for keyless admin access. Skilled in VPC, EC2 Auto Scaling, and IAM least-privilege design, with working knowledge of Python, Git, and the AWS CLI. Targeting Cloud Support or Junior Cloud Engineer roles, with Solutions Architect as the long-term path.

SKILLS

- Networking & Compute:** VPC, subnets, NAT Gateway, EC2, Auto Scaling Groups, Application Load Balancer, security groups
- Serverless & Data:** Lambda, API Gateway, DynamoDB, RDS (MySQL, Multi-AZ), S3, CloudFront
- Security & Ops:** IAM least-privilege, CloudWatch, VPC Flow Logs, AWS Config, AWS Backup, Origin Access Control
- Languages & Tooling:** Python (boto3), Git, AWS CLI
- Core Support Skills:** Infrastructure Testing & Validation, CloudWatch Monitoring & Alerting, IAM & Security Hardening.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (SAA-C03)

Feb 2026

AWS Certified Cloud Practitioner (CLF-C02)

Dec 2024

AWS re/Start Graduate

July 2024

AWS Cloud Quest (Cloud Practitioner Badge)

May 2024

PROJECTS

Highly Available Three-Tier Web Application - [GitHub](#)

- Designed a custom VPC (10.0.0.0/16) across two Availability Zones with six subnets (public, app, data) and a NAT Gateway per AZ for resilient outbound access.
- Deployed an EC2 Auto Scaling Group (min 2 / max 4) behind a multi-AZ Application Load Balancer, with layered security groups chained tier-to-tier.
- Ran a live RDS MySQL 8.0 Multi-AZ failover, measuring recovery in under 2 minutes with zero data loss (RPO = 0); terminated a running instance to confirm ASG self-healing.
- Served the front end via dual-origin CloudFront with Origin Access Control, and instrumented the stack with CloudWatch Alarms, VPC Flow Logs, AWS Config, and AWS Backup (30-day retention).

Serverless Contact Form API - [GitHub](#)

- Built a fully serverless backend using API Gateway, Lambda, and DynamoDB, removing all server management overhead.
- Applied least-privilege IAM roles scoped per function and validated end-to-end request handling from form submission to data persistence.

Image Labels Generator (Amazon Rekognition) - [GitHub](#)

- Built a Python (boto3) command-line tool that runs Amazon Rekognition label detection on images stored in Amazon S3, printing detected labels with confidence scores and drawing labelled bounding boxes over each recognized object.
- Scoped the IAM user to least-privilege access only - rekognition:DetectLabels and s3:GetObject on the target bucket and configured AWS CLI credentials with matching S3 and Rekognition regions.

Daily Task Scheduler (Amazon PartyRock) - [GitHub](#)

- Designed and published a no-code generative-AI app on Amazon PartyRock (Amazon Bedrock foundation models) that turns a task list into a prioritized, time-blocked daily schedule with a conversational adjustment chatbot, built through prompt engineering and widget design.

SecureCart — Secure Multi-Tier Web Application on AWS - [GitHub](#)

- Designed an internet-isolated multi-tier architecture (2-AZ VPC, ALB, private EC2, encrypted RDS) using defense-in-depth with layered security groups
- Secured traffic with AWS WAF (SQL injection/XSS rules) and keyless admin access via SSM Session Manager
- Verified the database was unreachable from the public internet through live connectivity testing, proving the isolation model

TRAINING

Career Break & AWS Cloud Upskilling	<i>Dubai, UAE. Jul 2024 - Present</i>
- Completed AWS re/Start and earned SAA-C03 and CLF-C02 certifications. - Built and documented AWS projects spanning three-tier HA architecture, serverless, security, and generative AI.	
AWS Cloud Practitioner Training - EduBridge	<i>Mumbai, India. Mar 2024 - Jun 2024</i>
Completed structured AWS training covering core services, security, billing, and the Well-Architected Framework, with hands-on labs across EC2, S3, IAM, and VPC; scored 92% (A+).	
EduBridge & Capgemini (www.edubridgeindia.com)	<i>Mumbai, India.</i>
<i>Certification Program in Java Full Stack Development.</i>	<i>May 2022 - Feb 2023</i>
Sololearn (www.sololearn.com)	
<i>Java & Python Core</i>	<i>Dec 2022</i>
<i>Hacker Rank Java Skill Assessment</i>	<i>Mar 2023</i>

EXPERIENCE

Accenture (www.accenture.com)	<i>Bangalore, India.</i>
Associate Software Developer Intern	<i>Dec 2023 - Feb 2024</i>
- Developed and maintained SAP ABAP functionalities include event handling, report generation, view creation, table manipulation, internal table utilization, and modularization techniques in alignment with project requirements. - Database and environment configuration experience relevant to cloud infrastructure work, applied SAP ABAP skills across modern database environments. - Completed case study project addressing client requirements within a predefined scenario, with a viva presentation.	
Nuevera Infotech (www.nueverainfotech.com)	<i>Dubai, UAE.</i>
Associate Artificial Intelligence Developer Intern	<i>Aug 2023 - Dec 2023</i>
- Collaborated with AI developers to design, develop, and deploy scalable solutions and applications including chatbots with emotion and motion detection using Python libraries like pandas, gTTS, and SpeechRecognition. - Conducted research and testing to optimize real-time emotion and motion analysis models for scalability and efficiency. - Cloud-relevant foundation, hands-on Python-based service integration and cross-functional deployment, since extended into Python (boto3) automation of AWS resources.	
Nullclass (www.nullclass.com)	<i>Dubai, UAE.</i>
Full Stack Web Developer Intern	<i>Mar 2023 - Aug 2023</i>
- Designed user-friendly web interfaces using HTML, CSS, and JavaScript, focusing React for front-end development, Express and Node.js for efficient backend development. - Implemented responsive design and integrated MongoDB database to enhance data storage and retrieval processes. - Early deployment and ops exposure now central to cloud support: managed application infrastructure on Render and Netlify, including environment configuration and release management. - Developed a live Stack Overflow clone project, accessible at: [https://stack-over-flow-clone-6122.netlify.app].	

Education.

Anna University	<i>Chennai, India.</i>
Bachelor of Engineering Computer Science	<i>April 2021</i>

Additional Information.

• Notice Period	Immediate Joiner.
• Visa Status	UAE residence visa held (renewable).
• Linguistic skills	English, Malayalam, Tamil and Hindi.
